

TEMPCOMM PORTABLE RADIO SYSTEM

Rental communications solution for short-term projects

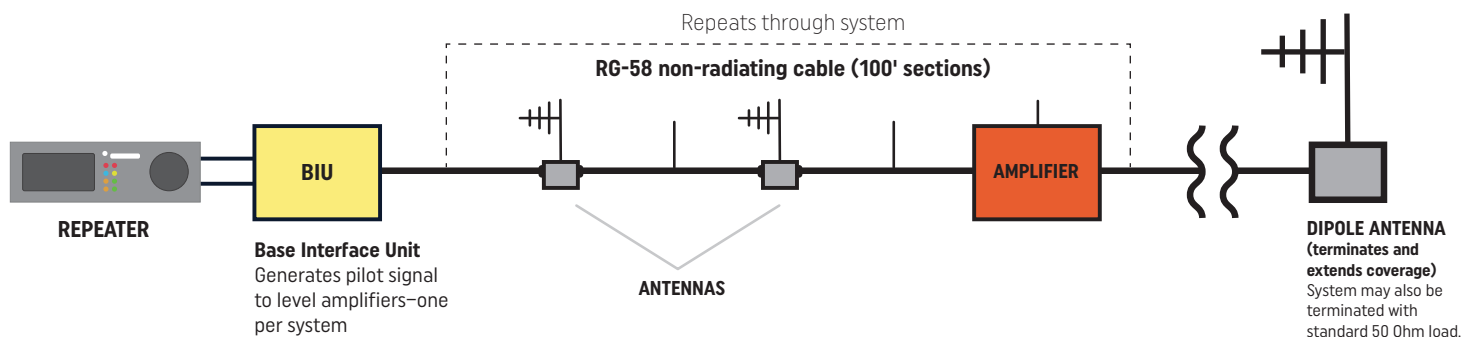

You don't have to give up continuous radio coverage for temporary projects. The first of its kind, Tunnel Radio's TempComm system offers all the benefits of a full-fledged confined space communications system in a modular, easy-to-install package:

- Easy deployment and retrieval in just a few hours
- Rugged, water resistant components and cases
- Damage-free installation with no drilling required
- Modular, scalable design delivers continuous coverage up to 1 mile long
- Dependable communication solution for increased safety and productivity
- Rental solution for short-term usage on your schedule
- Expert installation and training from a Tunnel Radio technician

Boost the safety and productivity of your team during inspections, construction work, or other short-term projects with our hassle-free solution.

Features

- Backup battery and chargers included
- RG-58 RF cable
- Antennae placed every 100 feet
- Software-Defined Amplifiers (SDA) with auto-adjust capabilities
- Base unit levels amplifiers and repeater maintains contact with team above ground
- Battery operated system runs for up to 1 business week (12 hour days) on a single charge
- All RF is isolated to underground working areas, so no FCC licensing is required

TempComm delivers continuous underground connectivity in a portable, easy-to-install package.
